

ASSIGNMENT – IV
TEAM ID: PNT2022TMID23457

Write code and connections in wokwi for ultrasonic sensors.

Whenever distance is less than 100cms send "alert" to ibm cloud and display device recent events.

Code:

Output :

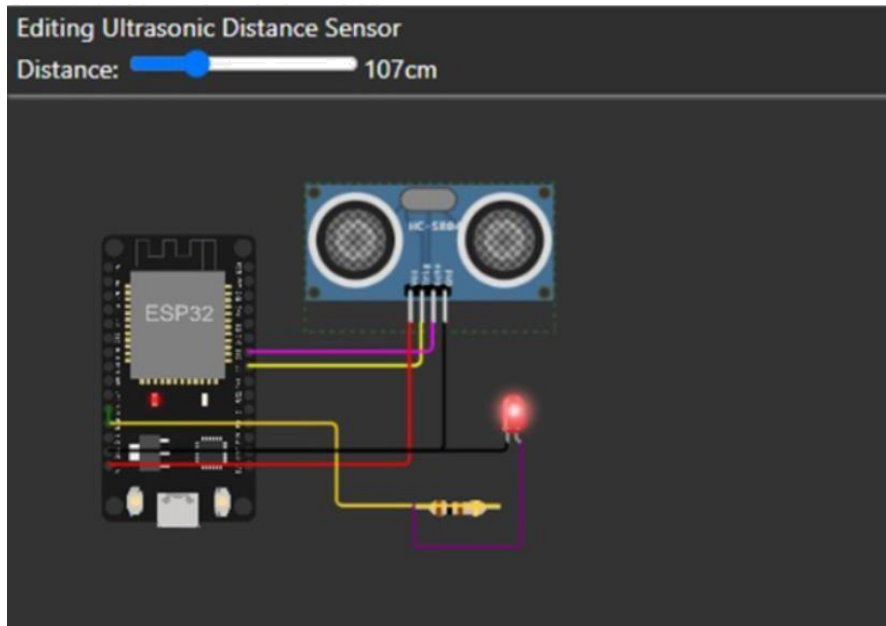

1) When Distance < 100 cm, it will show normal distance.

The screenshot shows a web interface for an IoT project titled "Editing Ultrasonic Distance Sensor". At the top, there is a slider control for "Distance:" set to 90cm. Below this is a wiring diagram showing an ESP32 microcontroller connected to an HC-SR04 ultrasonic sensor and a red LED. The sensor's VCC is connected to the ESP32's 5V pin, GND to GND, Trig to D4, and Echo to D5. The LED's anode is connected to D4 and its cathode to GND. The dashboard log shows the following messages:

```
Sending payload: {"Normal Distance":89.95}  
Publish OK  
  
Sending payload: {"Normal Distance":89.95}  
Publish OK  
  
Sending payload: {"Normal Distance":89.95}  
Publish OK  
  
Sending payload: {"Normal Distance":89.98}  
Publish OK  
  
Sending payload: {"Normal Distance":89.95}  
Publish OK  
  
Sending payload: {"Normal Distance":89.95}  
Publish OK
```

2) When distance > 100cm <110cm, alert with warning message occurs.

```
Sending payload: {"Alert distance":106.98}  
Warning crosses 110cm -- it automaticaly of the loop
```

```
Sending payload: {"Alert distance":106.98}

```

```
Sending payload: {"Alert distance":106.98}

```

```
Sending payload: {"Alert distance":106.98}

```

3) When distance > 110cm, totally moves to iff state.
